

Time Value of Information

$$\text{Time - Value} = \frac{(\text{Value of Future Benefits})}{(1 + C)^N}$$

The time value of information is equal to the value of future benefits that can be realized by employing information, discounted by the cost of maintaining those benefits. The time value of information formula can be simplified as in the illustration above. The complete formula for the time value of information is provided at www.The5Ps.com/LEM/TimeValueOfInfo.html.
